

TITLE PAGE

Project Title:

DESIGN AND IMPLEMENTATION OF AN ONLINE CLEARANCE SYSTEM

Student Name:

Eke Destiny Chinecherem

Matriculation Number:

FUKU/SCI/21B/COM/0011

Department:

Computer Science

Faculty:

Faculty of Science

Institution:

Federal University of Kashere

Supervisor's Name:

Mr. Usman Umar

Year:

2026

CHAPTER ONE

INTRODUCTION

1.1 Background of the Study

Clearance is an essential administrative process in higher institutions used to confirm that graduating students have fulfilled all academic and financial obligations before being awarded certificates. Traditionally, student clearance involves visiting multiple offices such as the department, faculty, library, bursary, and student affairs to obtain signatures and stamps. This process is often time-consuming, stressful, and inefficient.

With the advancement of information and communication technology, many institutions around the world have adopted online systems to automate administrative processes. Online clearance systems allow students and staff to perform clearance activities electronically, reducing paperwork and physical movement. According to Adeyemi (2021), digital administrative systems improve efficiency, transparency, and record management in tertiary institutions.

In Nigeria, many universities still rely on manual clearance procedures, which are prone to delays, loss of records, impersonation, and corruption (Akinwale, 2022). These challenges highlight the need for an effective online clearance system that can simplify and streamline the clearance process for students and university administrators.

In university like Kashere, there is need for automated method of keeping data, more so a greater need for an online clearance system. This would a long way in alleviating the various problems and stress involved in the manual method of clearance. Moreover, the issue of delayed youth service as a result of mobility to complete the tedious manual process of clearance would be curtailed.

1.2 Statement of the Problem

The existing manual student clearance system in many tertiary institutions is inefficient and stressful. Students are required to move from one office to another to obtain clearance approval, which often leads to long queues, delays, and unnecessary expenses. Records may be misplaced, signatures may be forged, and verification becomes difficult. Additionally, administrators find it challenging to track cleared and uncleared students accurately. These problems negatively affect the overall efficiency of the institution's administrative process.

1.3 Aim and Objectives of the Study

Aim

The aim of this study is to design and implement an online clearance system for tertiary institutions.

Objectives

The specific objectives of the study are to:

- Examine the existing manual student clearance process.
- Design an online clearance system that automates the clearance process.
- Implement the system using appropriate software tools.
- Evaluate the effectiveness of the developed system in improving clearance operations.

1.4 Research Questions

The following research questions guide the study:

- What challenges are associated with the existing manual clearance system?
- How can an online clearance system be designed to address these challenges?
- How effective is the implemented online clearance system in improving efficiency and record management?

1.5 Significance of the Study

This study will be beneficial to students by reducing the time and stress involved in the clearance process. University administrators will benefit from improved record management, transparency, and easy tracking of cleared students. The institution will experience improved efficiency and reduced paperwork. Additionally, the study will serve as a reference material for researchers and students interested in developing administrative management systems.

1.6 Scope of the Study

This study focuses on the design and implementation of an online clearance system for a tertiary institution. The system covers student clearance activities such as departmental clearance, faculty clearance, library clearance, and bursary clearance. The study is limited to clearance processes and does not include result computation, course registration, or certificate issuance.

1.7 Definition of Key Terms

Online Clearance System: A web-based system used to automate the student clearance process in tertiary institutions.

Clearance: The process of verifying that a student has fulfilled all institutional requirements.

Database: An organized collection of data stored electronically for easy access and management.

System Implementation: The process of deploying and using a developed system in a real-life environment.

User Authentication: The process of verifying the identity of users before granting access to the system.

Summary of the Proposal

This chapter discusses the background of student clearance, identifies problems with the manual system, outlines the objectives of the study, explains its importance, and defines the scope and key terms of the online clearance system.
